New Features

The following features are new to Order Management in this release.

- Creating Rules to Automate In-flight Order Changes
- Executing Order Workflow Automation Rules for In-Flight Order Changes

Creating Rules to Automate In-flight Order Changes

In this release, Apttus Order Management allows you to create rules to Automate In-flight Order Changes. Using these rules, you can automate in-flight changes including canceling orders or amending order lines.

Get Started

For more information, see Creating Order Workflow to Automate In-flight Order Changes in *Order Management on Salesforce Summer 2019 User Guide*.

Executing Order Workflow Automation Rules for In-Flight Order Changes

In this release, Apttus Order Management is introducing order workflow rulesets for in-flight order changes. You can now create order workflow rules to automate in-flight order changes, which are evaluated and executed while creating a new order from a Quote or while accepting changes to an existing order. You can also manually trigger the order workflow automation rules by setting the "Ready for Workflow" flag on the order header for orders in "Pending", "In Fulfillment", or "Partially Fulfilled" status."

Get Started

For more information, see Automation of In-Flight Order Changes in *Order Management on Salesforce Summer 2019 Administrator Guide*.
