New Features

The following feature is new to TurboPricing in this release.

TurboPricing: Support for Multiple Adjustments

In this release, you can apply more than one manual adjustment to the line items on the cart page. The administrator uses the Config System Property (Max Adjustment Lines) to set the maximum number of adjustments allowed for a line item.

The TruboPricing supports the following adjustments:

- % Discount
- % Discount Off List
- Discount Amount
- Discount Amount (Bundle Only)
- % Uplift
- % Markup
- Markup Amount
- Markup Amount (Bundle Only)
- Price Override
- Base Price Discount
- Price Factor

For more information, see .Applying Multiple Adjustments on Line Items in the Cart.

Known Issues

The following table provides the cumulative list of known issues up to this release.

Conga Internal ID	Description
CPQ-58757	The exclusion rule in the service CPQ flow does not work in the unified cart-enabled org.
CPQ-58756	The inclusion rule in the service CPQ flow does not work in the unified cart-enabled org.
CPQ-58544	You can not finalize the cart after revalidating the expired or inactive primary PLIs of the product.
LS-8577 / CPQ-54027	When you relaunch the saved cart, the cart displays the incorrect progress bar message.
LS-8856/ CPQ-53987	When the saveAdjustmentLineItems action is in progress, you observe a top progress bar instead of the Save action button.
LS-8249 / CPQ-54022	The attribute-based pricing does not work for the numeric expression.
LS-8477 / CPQ-53772	The product attribute value field does not clear after clicking the Validate button.
CPQ-56707	In the TurboEngines flow, CPQ does not update the summary group custom formula field value on the UI when a product is auto-included.
CPQ-55534	You observe duplicate options entries in the option group on the product configuration page after switching the option selection.
CPQ-54164	The auto-publish is not triggered automatically for a few products after data sync.
CPQ-55638	When you try to reconfigure the product in a finalized quote, the optional product is getting enabled automatically if the option is auto-included by another constraint rule.
