Feature Summary

Digital Commerce has been released on the Salesforce platform with the following features:

- [Digital Commerce](#)
- [Functional Capability Summary](#)
- [List Of Client Services](#)

Digital Commerce

Digital Commerce Summer 2018 is the first release on the Salesforce platform. Apttus Digital Commerce empowers enterprises to quickly evolve and scale global Omni-Channel selling strategies. Apttus Digital Commerce provides enterprises with the agility, speed and scale to create unique, valuable customer experiences that drive greater brand consistency and revenue. From streamlining and simplifying complex selling scenarios involving Configure Price Quote to Partner Commerce, Apttus Digital Commerce scales across diverse selling strategies quickly.

The following is a list of features offered in this release of Digital Commerce on Salesforce.

List Of Client Services

Feature Category (Module)	Services	Description
CartModule	CartService	A Cart contains the product and custom cart items that a user may wish to purchase.
CatalogModule	CategoryService	Categories allow you to organize your Products into hierarchical groups. That means these groups can also contain other Categories, which can then be viewed in a tree structure. All categories returned from this service are translated based on the user's locale.
	ConstraintRuleConditionService	Constraint rules are powerful when configuring products. They allow you to include, excludes, recommend, validate and replace products based on business logic.
	ConstraintRuleService	Constraint rules are powerful when configuring products. They allow you to include, excludes, recommend, validate and replace products based on business logic.

Feature Category (Module)	Services	Description
	ProductAttributeRuleService	Product attribute rules are a powerful feature that add a level of dynamic configuration to products a given set of product attributes.
	ProductAttributeService	Product attributes represent a characteristic of a product that can have different values. I.e. colors of a given product.
	ProductOptionGroupService	Product option groups are a way of grouping the individual options for a product.
	ProductOptionService	Product options are individual products that users can select from when configuring a bundle.
	ProductService	Products are the core resource to any Apttus project. They can be associated by category, collection, brands and more.
	SearchService	The search service is a way to find products and aggregate information within the catalog.
OrderModule	OrderService	The order object represents an order in Apttus. Only orders where the current user is the owner will be returned by this service.
	QuoteService	The quote represents a price breakdown for a given product configuration. Quotes are generally associated with an approval process and can be converted to a cart or an order.
	TemplateService	A template service provides methods for the proposal and agreement templates within Apttus. Use this to retrieve template records.
PricingModule	ConversionService	<p>The conversion service is responsible for pulling conversion rates from your Salesforce instance.</p> <div style="border: 1px solid orange; padding: 5px; margin-top: 10px;"> <p> Remember to set the enableMultiCurrency in your salesforce.config.ts file to true.</p> </div>
	PriceListItemService	The price list items map a product to a specific price list. They provide the base price for any product in your catalog.

Feature Category (Module)	Services	Description
	PriceListService	Price lists are the core object for defining the catalog seen by the end user. Categories, products and pricing are all derived from the selected price list.
	PriceMatrixService	Price matrixes are used to map various product facets to a price adjustment. For example, there may be matrixes for attributes or quantities that adjust the base price. Use this service to retrieve the data for those matrixes.
	PriceRuleService	Stubbed service for Apttus price rules. Currently has no supporting methods.
	PriceService	Client-side pricing engine for retrieving price for various points in the ecommerce application. NOTE: It is not guaranteed that this service will always return accurate pricing for a given cart. You should always call cartService.priceCart(...) to trigger the server-side pricing engine to get the final price of a given cart. There are also pipes provided that wrap this service to provide pricing within a template i.e. ProductPricePipe, OrderPricePipe, CartPricePipe and more.
StoreModule	AccountLocationService	The Address-Location service allows you to organize account addresses. Addresses are a sub-resource of an Account. An account may have multiple addresses.
	AccountService	The account service provides methods for interacting with the accounts the user has access to.
	ContactService	The contact service provides methods for interacting with the contacts the current user has access to.
	EmailService	The email service provides methods for sending email communications.
	StorefrontService	The storefront record is the backbone to the customer experience. It drives catalog, pricing and interface.
	UserService	The user service is the primary service for user interactions. This includes updating the user record, login/logoff, and more.

Resolved Issues

There are no resolved issues for this release.

Known Issues

There are no known issues for this release.
