ⓘ Before installing or upgrading Conga managed packages, you must review the dependency matrix for each managed package. You can refer to the package dependency matrix at Packages Dependency Matrix.

System Requirements and Supported Platforms

The following table lists the minimum requirements for installing and using Digital Commerce.

System Requirement	Minimum Supported Version
Operating System	Standard Salesforce.com requirements. See Salesforce PDF.
Browser	Conga supports the following browsers: • Microsoft Edge • Google Chrome Conga recommends the latest version of the browser for the best performance. Conga also recommends its customers to use Microsoft Edge as the browser of choice. ⚠ Internet Explorer is not supported.

Upgrade Notes

For more information on the prerequisites and post-upgrade tasks, see Upgrading Digital Commerce in *Digital Commerce on Salesforce Implementation and Deployment Guide.*

New Features

The following features are new to Digital Commerce in this release.

SDK Integration with Digital Commerce for Turbo Data API's

Digital Commerce SDK is integrated for Turbo Data API's that are part of the TurboPricing component with this release. TurboPricing is an optional pricing engine built using microservices to reduce the processing time on the cart. This release enhances the performance with reduced time in fetching the master data such as product details, categories through Turbo Data APIs only. To gain performance benefits, you must configure TurboEngines with Turbo tenant onboarding.

> ⚠ To consume the capabilities of this release, you must have TurboPricing Version 2021.4.1.

Get Started

For details on the TurboPricing setup, refer to Configuring TurboEngines in *Digital Commerce Summer '20 Patch 1 Implementation and Deployment Guide.*

For details on the updated SDK, refer to SDK Reference in *Digital Commerce Summer '20 Patch 1 SDK Guide.*

Enhancements

There are no new enhancements in this release.

Data Model Changes

This release does not have any data model changes for Digital Commerce.

Resolved Issues

There are no resolved issues in this release.

Known Issues

The following table provides the cumulative list of known issues up to this release.

Conga Internal ID	Description
LS-6641	1. Selecting the sub-category on the Catalog page does not display the products within it. 2. Also, the Product Option Group name is not displayed on the product details page. This is caused due to the **Option Group ID** field from the managed package with the API name as *Name*. **Workaround**: You must select the **Option Group field** with the API name *Apttus_Config2__OptionGroupId__c* for the Product Option Group Name to appear.
LS-6579	With the TurboPricing master data integration, the pricelist is not associated with categories.
DC-5903	TurboPricing integration supports up to 20 line items for the price calculation.
