Conga Configuration & Pricing **(New)**	12.1.1787.121 | 12.1787.121
Conga Quote Configuration Integration	12.1.0332.10 | 12.332.10
Conga CPQ Setup	12.1.61.5 | 12.61.5
Conga CPQ API	12.1.0104 | 12.104
Conga Promotions (Required if you are using Promotions)	1.0.0000 | 1.0
Conga Quote Asset Integration (Required if you are using Assets Based Ordering)	6.5.0014 | 6.14

Product	Latest Certified Version *Version Name	Version Number*
Conga Order Management	1.0.0000	1.0
Conga Billing Management	6.2.238.7	6.238.7

> ⓘ Before installing or upgrading Conga managed packages, you must review the dependency matrix for each managed package. You can refer to the package dependency matrix at Packages Dependency Matrix.

System Requirements and Supported Platforms

The following table lists the minimum requirements for installing and using Digital Commerce.

System Requirement	Minimum Supported Version
Operating System	Standard Salesforce.com requirements. See Salesforce PDF.
Browser	Conga supports the following browsers: • Microsoft Edge • Google Chrome Conga recommends the latest version of the browser for the best performance. Conga also recommends its customers to use Microsoft Edge as the browser of choice. ⚠ Internet Explorer is not supported.

Upgrade Notes

For more information on the prerequisites and post-upgrade tasks, see Upgrading Digital Commerce in *Digital Commerce on Salesforce Implementation and Deployment Guide.*

New Features

There are no new features in this release. Keep checking the documentation portal for updates.

Enhancements

The following section describes existing features that are changed (or are no longer supported) in this release.

Support for Usage Price Type with TurboPricing (DC-6799)

Use of Price Type = Usage is now supported with TurboPricing.

Get Started

For a complete list of available features and capabilities, refer to Supported Features in Digital Commerce With TurboPricing Integration in *Digital Commerce on Salesforce Summer '20 Patch 1 User Guide*.

Support for Models with Expose Decorators

The Digital Commerce SDK has been updated with the following model changes to be used with expose decorators.

- CartLineitem
- AdjustmentLineitem
- Incentive
- SummaryGroup
- TaxBreakup
- TaxCode
- Cart
- AppliedRuleActionInfo
- AppliedRuleInfo
- Account
- AssetLineitem
- OrderLineitem
- Order
- QuoteLineitem
- Quote

Get Started

For more information on the supported models, refer to Adding Custom Fields on Object Models in *Digital Commerce on Salesforce Summer '20 Patch 1 Implementation and Deployment Guide.*

Update to the Pricing API with LineNumber as Query Parameter

The Pricing API is updated to include lineNumber as a query parameter. This query parameter is used to pass the line number(s) to return only associated lineitems after pricing. Do not pass the lineNumber in the following cases:

- All the line items need to be retrieved
- One line item having dependent pricing change on unrelated line items in the cart

For use cases like Related Pricing, all the related line items or the entire cart must be passed for the correct pricing results. If all related lines in the cart are not passed pricing may not be accurate.

Get Started

For details on the pricing API, refer to CPQ REST API Version 3 in *Digital Commerce on Salesforce Summer '20 Patch 1 REST API Guide.*

Data Model Changes

This release does not have any data model changes for Digital Commerce.

Resolved Issues

The following table lists resolved issues from the previous release.

Conga Internal ID	Description
DC-6775	Multiple manual promotions were not applied to the cart.
DC-6706	Changing the End Date of a bundle product did not update the selling term of the Option product using TurboPricing. The option price was added but without multiplying with the selling term resulting in incorrect net price and cart total price. **Solution**: Ensure that the **Auto Cascade Selling Term** checkbox is selected on the Price List Item for the option. Selecting this checkbox indicates that the selling term is auto cascaded from the bundle product to the options.

Known Issues

There are no known issues in this release.
